

Addressing Infection Control Demands in a Dental Setting Conference

October 19, 2012

Burjeel Hospital Auditorium, Abu Dhabi

Dear Colleagues,

This program has been developed to provide the most current information on infection control and barrier precautions practices and principles in dental settings to minimize the transmission of dental associated infections.

In today's world, the need for infection control has never been greater. Dentists, their staff and patients are more concerned about the transmission of infection than ever before. Controlling bacterial contamination through sterilization has long been considered the most essential component in the infection control process and vital to patient safety. The result of proper instrument sterilization is the protection of the patient, physician and staff from various infectious diseases.

The Program and Workshop features the latest best practices and standard precautions in infection control in a dental settings presented by national experts with a passion and commitment for improving the quality of infection control. The conference attracts Dentists, Maxillofacial Surgeons, Dental Hygienists, Dental Technicians, Dental Assistants and Dental Nurses to learn about applying Standard Infection Protocols in a dental setting to improve patient outcomes.

We invite you to participate in this scientific event and have a unique opportunity to network with your colleagues and keep abreast of the latest developments in infection control.

**Dr. Sara Gamal,
Conference Producer**

CONFERENCE OBJECTIVES

Upon completion of this educational activity, participants should be able to:

- Discuss the Standard Infection Protocols to be followed in a Dental Setting
- Review sterilization practice for dental instruments, hand pieces and methods of verification for sterilization
- Discuss the updates on safety guidelines that dental practitioners and dental auxiliaries must follow
- Review the Dental Practice CDC and ADA Guidelines.
